

כ"ו

some aspects of

• Async all the time

• *diserinput whenever*

• You want to have a single data store

• Events manipulate data

• *unhastoreat*

• Multiple events can happen at the same time

The physics have to be reinterpreted at target FPS

Some aspects of game dev

- Async all the time
- User input whenever
- You want to have a single data store
 - Events manipulate data
 - UI has to react
 - Multiple events can happen at the same time
 - The physics have to be respected and rendering happens at target FPS

**So, what is this talk
really about?**
