

The screenshot shows a web browser's developer tools interface. The left sidebar displays the file system structure, with the file `app_assets_modules_github_behaviors_commenting_edit_ts` selected. The main pane shows the source code of this file, which is a JavaScript module. The code includes a `use strict` directive, a `globalThis.webpackChunk` assignment, and a function `44709: (e, t, s) => {`. The function contains several variables (`n, i, o, r, l, a, m, c, u`) and a series of DOM manipulations, including `e.querySelector(".js-write-tab").click()`, `t.focus()`, and `t.setAttribute("loading", "eager")`. The right sidebar shows the 'Breakpoints' panel, which is currently empty. The bottom status bar indicates 'Source map loaded' and 'Coverage: n/a'.
